tacky side down. Do not apply directly over natural hair. Do not apply over makeup. **Apply to clean product/makeup free skin. See! As simple as that!**

**Step 2. Apply water**

Wet the backside of the tattoo. Apply gentle pressure for 15-30 seconds. *You are doing great till now!*

**Step 3. Reveal**

Peel away slowly and reveal your results. Slowly wipe away any excess adhesive on the natural hairline with a damp sponge/cloth wiping towards the hairline. Don't worry if you get any excess in your hair, it easily wipes off, so that you can apply the design closely to your hairline. Apply any edge gel to natural hair line as needed/ or preference. *I woke up like this!*

**How to remove:**

When you are ready to change your baby hairs, they are easily removed by rubbing the forehead with a wet sponge in a circular motion using any alcohol based product such as astringent or makeup wipes.
